

ENVIRONMENTAL POLICY

Automationstechnik Sp. z o. o. operates on the basis of a sustainable development strategy, which assumes a conscious and properly formed relationship between economic growth, care for the environment and human health.

Environmental protection is implemented through the objectives listed below:

- complying with and meeting the requirements of Polish legislation and European standards in the field of environmental protection,
- preventing and reducing emissions of pollutants into the environment and reducing greenhouse gas emissions,
- rational management of raw materials, materials, water, electricity and heat,
- taking continuous measures to improve environmental impact as the basis for development in the pursuit of continuous becoming better,
- continuously improving the effectiveness of environmental impact control and prevention activities by identifying significant environmental aspects, eliminating or mitigating them, and counteracting them,
- minimizing technological waste and conducting environmentally safe waste management by optimizing production processes, as well as segregating, storing and transferring waste for processing or utilization,
- using new available techniques when starting investment or modernization tasks, taking into account economic and environmental approaches,
- raising the environmental awareness of Automationstechnik Sp. z o. o. employees.

The tool for achieving the above goals is an implemented and continuously improved environmental management system that meets the requirements of PN-EN ISO 14001:2015-09.

Furthermore, Automationstechnik obliges to:

- protect the environment and prevent its pollution,
- meet legal and other requirements in accordance with PN-EN ISO 14001:2015-09,
- continuously improve the environmental management system.

The Company's management is responsible for the effectiveness of the environmental management system. Managers of organizational units supervise and coordinate the implementation of all activities in the environmental management process and ensure that the environmental management system is maintained and improved in their area of operation.

The principles of the **Environmental Policy** and the obligations assumed in it have been made known to the employees of Automationstechnik Sp. z o. o..

The introduced Policy is available to the public and is updated adequately to changing reality and requirements.

All employees of the Company and those working on behalf of the Company are familiar with the Company's **Environmental Policy** to the extent that they can consciously participate in the implementation of its objectives and principles.
